

Georgia Power

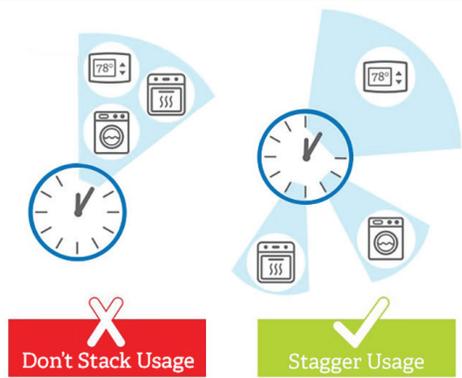

Smart Usage

Residential customers moving into newly constructed homes* after January 1, 2021 have a new standard rate – Smart Usage. In the 2019 rate case, the Georgia Public Service Commission approved the change to make this rate option the default for new residential premises. Smart Usage is Georgia Power’s most modern rate design and offers convenient ways for customers to manage their energy use and save on their bills. Best of all, Smart Usage is a great fit for new homes built with today’s efficient construction codes and outfitted with technology-enabled appliances. However, in the event a residential customer does not want to enroll in Smart Usage, they are free to choose any rate plan that fits their energy needs and lifestyle.

The Smart Usage Concept

Don't Stack Usage **Stagger Usage**

How the rate works

There are two ways to manage your bill on the Smart Usage rate:

1. Avoid simultaneous use of major appliances. If you can avoid running appliances at the same time, then you could reduce your maximum usage of power in a 60-minute period. This translates to less demand on Georgia Power, and savings for you.
2. Shift some of your summer energy usage away from the on-peak time periods (2-7 p.m., Monday–Friday, June–September, excluding holidays).

*Newly constructed homes include both single-family and multi-family housing units. Once service transitions from temporary to permanent service, Smart Usage will apply as the new rate unless otherwise specified or requested.
