**Re: Plant Wansley - NPDES Permit No. GA0026778  
ELG Annual Progress Report**

Dear Ms. Fenwick:

Georgia Power Company (the “Company”) is providing this Annual Progress Report for Plant Wansley, consistent with 40 C.F.R. § 423.19 (f)(3) and the 2020 Steam Electric Effluent Limitations Guidelines (“ELGs”). On October 13, 2021, pursuant to 40 C.F.R. § 423.19(f) the Company submitted to EPD a Notice of Planned Participation (“NOPP”) for Units 1 and 2 at Plant Wansley. The NOPP informed EPD that subject to Georgia PSC approval, Plant Wansley Units 1 and 2 were planned to permanently cease coal combustion by no later than December 31, 2028, and were therefore eligible for the alternative limits at 40 C.F.R. § 423.13(g)(2)(i); Plant Wansley Units 1 and 2 were retired on August 31, 2022. Since the 2023 Annual Progress Report, the Plant Wansley NPDES permit was modified to remove the generally applicable limits at Outfall 02P and became effective on November 22, 2023.

No further updates have occurred since the 2023 Annual Progress Report filing. The Company will continue to provide updates and Annual Progress Reports as required. If you have any questions or need additional information, please contact Stephanie Whitacre at [swhitacr@southernco.com](mailto:swhitacr@southernco.com) or 470-367-0303.

Sincerely,

Dominic Weatherill  
Environmental Affairs Supervisor
